

Don't Outsource Your Next Software Project

Outsourcing is a dirty word. It conjures up images of high priced consultants running away with your money and returning six months later with nothing but some diagrams and documents when you really needed software developed. It also denotes a lack of control over your project, and no longer sounds like a team effort. You want results, and you want control over your project. We agree.

Why We Are Different

We are not an outsourcing company; we focus on integrating with your existing team in order to provide the expected result at the best value possible.

Agile Methodologies

Using agile methodologies immediately shifts the focus from “doing work”, to “writing software”. This is a significant distinction. At the end of the day we need to deliver high quality software, and nothing less is a success.

Building The Best Teams

You already have a development team, but your project is either stalled, you don't have the skills you need in house, or you need a jump start to get the project back on schedule. We can help. The success you will achieve is a direct result of the team that we help build.

What You Get

Team Interaction

There is value in mentoring team members, and the knowledge transfer goes both directions. Something amazing happens when a team starts to work together seamlessly. It's a thing of beauty. We have successfully integrated our team members in clients' teams producing greater than expected results.

Our Expertise

Our team members are experts in their field. A high standard has been set. These individuals know agile development methodologies, Microsoft technologies, and the full software development life cycle. Most clients want to use an agile approach, but they don't know how to get started. We can help guide that process.

Quality Codebase

The code matters to the business; they just may not realize it yet. Increasing the quality of the codebase gives the development team the confidence to accurately estimate new features, and allows them to add features or fix bugs without fear of breaking a seemingly unrelated piece of the system. We have

proven that there are some very simple changes that will increase quality dramatically. Our goal is to leave your team with a good, solid, scalable architecture.

Current Technology

All of our consultants are up to date on the latest technologies used in your system, and only consultants who are experts in the technology in your system will work on your project.

Project Jump Start

Harnessing the power of our combined teams, expertise and quality codebase always gives the project a jump start. Once we leave, your existing team is left with software they're proud of, the knowledge of how to keep it that way, and the ability to effortlessly add new features and enhancements.

Let Us Help You

Let us help you get your project done the way you want, and provide some on the job mentoring and training for your staff.

A brief conversation of your projects, current team, and future needs can quickly help you determine if partnering with Front Range Systems is a good fit. We look forward to building a great team with you and delivering quality software for your organization.
